

Joaquin Leimeter

FULL STACK DEVELOPER

Profile

I am a web developer with a solid foundation in both front-end and back-end development. Throughout my experience, I have worked with different teams and taken on a variety of roles, which has allowed me to contribute across multiple stages of the product lifecycle, from discovery and design to implementation and release. Currently, I am expanding my knowledge in DevOps and infrastructure, with a focus on AWS. My goal is to develop the ability to work across the entire system, from the user interface to the underlying infrastructure.

Employment History

Ful stack developer, Radium Rocket, Rosario

FEBRUARY 2022 - PRESENT

I have worked on several projects, both internal and external to the company. On external projects, I have mainly worked as a front-end developer in teams of 4 to 7 people, using modern open-source technologies such as Vue.js, Nuxt, Tailwind CSS, Headless UI, pnpm workspaces, and Vite.

I am currently working as a full-stack engineer at Paytient Technologies, using React, Redux, Jest, and related technologies on the front end, and Java, Groovy, PostgreSQL, and related technologies on the back end.

On internal projects, I create and take part in training initiatives, teaching beginner and intermediate web development classes. These courses focus on helping people quickly learn the technologies required for specific projects.

Stage technician, Marti Audio, Rosario

JANUARY 2018 - DECEMBER 2019

Administrative Assistant, Velas el Angel SRL, Rosario

SEPTEMBER 2016 - DECEMBER 2017

Education

Become a Software developer course at Radium Rocket

Technologies

Front-end: development of modern web applications with React, Vue, and Astro.

Mobile: experience with React Native and Flutter.

UI/UX implementation: strong command of CSS, Tailwind, and CSS Modules, with experience translating Figma designs into functional interfaces and collaborating with design teams.

Back-end: experience building APIs and services with Node.js, Express, and NestJS.

AI-assisted development: use of AI tools to accelerate prototyping, debugging, implementation, and technical exploration.
